

JOHNSTON TEXTILES

ULTIMA FINISH

The Ultima Finish by Johnston provides the ideal fabric solution for the Hospitality, Healthcare, Restaurant, Auditorium, Arena, Worship and any other high traffic contract seating environment. Due to the qualities of the fiber used Johnston, is able to achieve a Class 5 when it comes to stain resistance. (Please view testing result page)

In addition to this, the Ultima Finish acts as a barrier that will not allow fluid to penetrate the fabric. Again here Johnston Fabrics perform to the highest industry standards. The barriers are tested with what is known as the Hydrostatic Sutter Test. The test determines the length of time the fabric can withstand a fluid before penetration. The ideal number is 100, which Johnston's Ultima Fabrics achieve. The industry will allow products ranging from 30-100 on the Sutter.

An added advantage of the Ultima Fabrics is the ability to use bleach in the cleaning process. A mixture of water and bleach is recommended. Spray or sponge the soiled areas with enough of this cleaner to wet the spot. Massage the spots with the finger tips, sponge or with a soft brush. Then wet vacuum away the soiled solution. Repeat if needed & rinse twice, & wet vacuum after each application of liquid. If a wet vacuum is not available, blotting with clean towels is a second method of removing some of the soiled liquid. Allow to air dry. Do not use a blow dryer or other intense heat.
